

## 500 TECHNICAL MODULES SERIES

Shelter for fire-fighting systems, electrical installations, generators, compressors, photovoltaic systems, etc., modules for plant protection substances, oils, paints and chemicals.

These units are built to the size and technical specifications provided by the customer.

The units for fire-fighting systems are built to standard **UNI EN 11292** and have wall and roof panels certified to **REI 60**, filled with mineral wool insulation in place of the standard polyurethane.

The modules for plant protection substances, oils, paints and chemicals are equipped with galvanised steel spill berms to prevent leakage of hazardous liquids or pollutants. The floor is made from galvanised grille. Specially sized grilles provide ventilation.

Our technical office is at the disposal of customers to design the most appropriate solution to meet any specific needs.
