

### TIPOLOGY

The Arizona garden shed with insulated panels can be used to store gardening equipment, lawnmowers, toys, bicycles and much more besides.

### STRENGTHS

- The insulated panel walls in pre-painted steel sheet provide effective heat and sound insulation.
- The elegant colours and materials allow the Arizona shed to blend in perfectly in your garden. The Italian design also adds that touch of originality and sophistication expected of a hand-crafted product.
- The high quality and durable materials mean that the shed is maintenance-free.

### STRUCTURE

The roof and base frame and the corner columns are made from cold press-bent galvanised steel profiles, thickness 15/10 or 20/10, then painted to the required colour. 4 hooking and lifting eyelets are positioned on the roof corners, and are removed after positioning, in order to preserve the appearance of the shed.

### FLOOR

The shed is supplied without flooring; where required, it is made from 18 mm thick waterproof chipboard, fixed to the base structure and covered in non-slip PVC or non-slip rice grain aluminium sheet.

### WALLS

The walls are made from self-supporting metal panels filled with high-insulating rigid polyurethane foam, 40 mm thick, total density 40 kg/m<sup>3</sup> and K=0.55 W/m<sup>2</sup>K. Galvanised and pre-painted sheet inside and out.
