

900 COMMERCIAL USE SERIES

TIPOLOGY

These prefabricated buildings are the ideal solution for commercial needs, kiosks, bars, trade fair stands, shops, gyms, etc.

STRENGTHS

Blutecnica designs and manufactures prefabricated units, paying attention to details and customised finishes to make them stand out from the usual units found on the market. The materials used, including:

- stainless steel
- alucobond
- wood
- rice grain aluminium
- coloured sandwich panels with special embossed surface finish

help to make these prefabricated buildings unique in both style

and construction technique, satisfying the tastes and needs of the customers.

Visit our photo gallery to see some examples of our works, particularly the kiosk built on the beach at Bibione: this is an equipped structure measuring approximately 800 m², with iroko wood flooring, stainless steel frame, services modules covered with alucobond and a whole series of details that make this construction one of a kind.

Blutecnica Srl reserves the right to modify its technical specifications at any time without notice.
